Pain Point Prioritization

The legacy core and customer-facing gaps need action first; data, CRM and cost issues are largely downstream of them

ID	Pain Point	Description	Evidence	Priority	Why this priority (impact, scale, urgency)
2	**Legacy Core Banking Platform**	High technical debt, performance issues and business-critical system risk.	17 P1s, 35% of IT cost (peers 15%), 85% utilization, client-impacting outages	High	Impact: daily customer-facing failures. Scale: every product depends on it. Urgency: outage and capacity risk grow each month.
3	**Customer-Facing Experience Gaps**	High-friction onboarding and usage experiences hurt CX and NPS.	25 incidents, high usage (app 82%, portal 77%), customer complaints	High	Impact: direct revenue and churn risk vs. digital-first banks. Scale: all retail and SME customers. Urgency: competitors are pulling ahead now.
5	**Outdated Reporting and Data Infrastructure**	Manual, inaccurate reporting and limited data reuse block compliance and decision-making.	Low trust, underfunded (data 10% vs peers 20%), stakeholder dissatisfaction	Medium	Impact: regulatory and decision risk. Scale: management and compliance users. Urgency: foundation for AI and personalization; escalate if regulators raise findings.
1	**CRM Fragmentation**	Lack of centralized customer data, redundant touchpoints and campaign inefficiency.	Siloed data, underused CRM (63%, often bypassed), marketing pain	Medium	Impact: weak personalization and cross-sell. Scale: sales and marketing. Urgency: best solved together with the data platform.
4	**Inefficient IT Operations and Cost Structure**	Over-indexed on run-the-business spend; minimal investment in change or innovation.	68% run cost vs. peers 60%, innovation underfunded	Low	Impact: real but mostly a symptom of the legacy estate. Urgency: falls as core and cloud moves land; take automation quick wins meanwhile.

Priority logic: High = customer-facing or business-critical, widespread, and worsening without action. Medium = significant but contained, or best fixed alongside a High item. Low = mainly a consequence of other pain points.
